

MEMORANDUM

To: COO, Monitri BaaS
From: Anumeha Princy, PMP® — Operations PM, Monitri BaaS
Date: May 31, 2025
Subject: SLA Performance Findings — Platform-Wide Recommendations | Jan–May 2025
Classification: Internal — Leadership Only

Purpose

This memo summarizes SLA performance findings from FIDP-2025-001 analytics (January–May 2025) and recommends four actions for COO approval. Findings are drawn from SQL analysis across 350 clients, 5 vendors, and 225 CI/CD deployment records. All data is sourced from the FIDP Looker Studio dashboard and SQLite database.

Key Findings

- **Overall SLA breach rate: 14.86%** — 52 of 350 clients breached SLA across Jan–May 2025. Established as the platform health baseline for all subsequent analysis.
■ Proof: SQL Query Q10 — client_sla table | Looker Studio SLA Compliance module
- **Payment Providers are the highest-risk client segment** — breaching at 21.74%, nearly 50% above the platform average. Average uptime gap of 0.08% confirms consistent underdelivery, not isolated incidents.
■ Proof: SQL Query Q11 (breach rate by client type) + Q13 (uptime gap by client type) — client_sla table
- **European regional risk is disproportionate** — France breached at 26.67% and Germany at 20.0%, both significantly above the 14.86% platform average despite smaller client bases. Same two regions appeared in anomaly escalation data, confirming a systemic infrastructure pattern.
■ Proof: SQL Query Q12 (breach rate by region) + Q7 (escalated anomalies) — client_sla + data_anomalies tables
- **Stripe API version mismatch is the #1 systemic CI/CD risk** — appearing 4 times across 5 months, more than any other root cause. Stripe also breached its vendor SLA 3 consecutive months — a dual risk requiring escalation beyond individual engineering patches.
■ Proof: SQL Query Q14 (recurring root causes) + Q8 (vendor SLA breaches) — cicd_pipeline + vendor_performance tables
- **Anomaly resolution time degraded 45% between February and April 2025** — from 5.23 hours to 7.60 hours. April spike correlates directly with Jumio's worst performance month, confirming vendor degradation measurably impacted ops team efficiency.
■ Proof: SQL Query Q15 (resolution time trend) — data_anomalies table | Cross-referenced with vendor_performance VND-003

Recommendations

1. **Implement permanent Stripe API versioning protocol** — coordinate between Monitri Engineering and Stripe to establish a version-lock agreement. Recurring root cause (4 occurrences) cannot be resolved through repeated patches. Engineering backlog priority escalation required.
■ Backed by: Analytics PM Actions Q14 Step 2 | cicd_pipeline dataset — Root_Cause frequency analysis
2. **Initiate Payment Provider SLA contract review** — renegotiate uptime commitments or strengthen penalty clauses for the Payment Provider segment. Breach rate of 21.74% with consistent uptime gap justifies formal contract review.
■ Backed by: Analytics PM Actions Q11 Step 2 + Q13 Step 1 | client_sla dataset — segment breach and gap analysis

3. Commission European infrastructure investigation — VP Engineering to investigate France and Germany deployment configuration. Cross-query pattern (SLA breaches + anomaly escalations) in both regions indicates a systemic infrastructure or compliance issue, not random variation.

■ Backed by: Analytics PM Actions Q12 Step 3 | client_sla + data_anomalies datasets — regional cross-query pattern

4. Establish internal anomaly resolution SLA — Critical anomalies resolved within 4 hours, High within 8 hours, Medium within 24 hours. February baseline of 5.23 hours confirms this is achievable. Resolution time to be tracked as a standing Looker Studio dashboard metric.

■ Backed by: Analytics PM Actions Q15 Step 4 | data_anomalies dataset — monthly resolution time trend

Next Steps

COO approval requested for all four recommendations by June 7, 2025. Upon approval:

- Stripe API versioning protocol — VP Engineering to initiate vendor coordination within 5 business days
- Payment Provider SLA review — Legal and Vendor Management Lead to begin contract review by June 15
- European infrastructure investigation — VP Engineering findings expected by June 21
- Internal resolution SLA — Ops PM to formalize and distribute to all HIGH stakeholders by June 10
